and v.1.5, added on Thursday,. Report problems with download to support@gamepressure.com. and v.1.3, added on Sunday,. Report problems with download to support@gamepressure.com. and v.1.2, added on Monday,. Report problems with download to support@gamepressure.com. and v.1.1, added on Monday,. Report problems with download to support@gamepressure.com. and v.1.0, added on Monday,. Report problems with download to support@gamepressure.com.1. Field of the Invention This invention relates to the technical field of power plant pollution abatement, more particularly to a power plant pollution abatement system based on photocatalytic oxidation. 2. Description of the Related Art Pollution in power plants is a major problem, and power plants in developed countries are taking a great amount of efforts and resources to solve it. During the last decades, the development of efficient power plants has been the main focus, and new power generation technologies have achieved significant progress in power efficiency. However, a considerable amount of pollution is still produced by coal combustion power plants, and significant improvements in pollution abatement are still in demand. In power plants, solid pollution is usually the largest contributor to total emissions. About 80% of total pollution emissions is due to the production of solid pollution in power plants. The remaining is the gas pollution, which is mainly carbon dioxide (CO<sub>2</sub>) and sulfur dioxide (SO<sub>2</sub>). However, combustion of coal in power plants produces other solid pollutants, such as nitric oxides (NO<sub>x</sub>), mercury (Hg),

---

and so on. The main contribution to the increase in CO<sub>2</sub> and SO<sub>2</sub> emissions from the burning of coal has been attributed to the combustion and emission of the solid pollutants. Pollution abatement methods developed in recent years focus on controlling the combustion process, that is, the solid pollutants are controlled in the flue gas before discharging. At the same time, due to the toxicity of the traditional pollutants, such as SO<sub>2</sub> and NO<sub>x</sub>, and their adverse effects on the environment and human beings, attention has been paid to SO<sub>2</sub> and NO<sub>x</sub> reduction. The main pollution abatement methods are selective catalytic reduction (SCR) and selective non-catalytic reduction (SNCR). For the SCR method, NO<sub>x</sub> in flue gas 82157476af
